

E2OPEN®

Collaborative Manufacturing Intelligent Application Suite

Manage outsourced or new production from acquisitions with the same quality and control as your own existing operations

Speed and accuracy are the new currencies of quality. A timely, precise response to production variances can mean the difference between a profitable run and a total write-off — or worse, consumer injury and a recall. Today's challenges arise not from line-level quality systems but from the fact that they are siloed, often at external partners and bridged by the slow, error-prone exchange of spreadsheets. What would it mean to your business if all quality data from your manufacturing ecosystem was automatically updated and available in one place in the cloud?

Consistent Quality for both Internal and External Manufacturing

Whether you are dealing with mandatory health and safety requirements, managing yields in capital-intensive production or protecting brand equity during a recall, quality is a critical cornerstone for both regulated and unregulated industries. Popular trends to grow through acquisitions and outsource manufacturing present a new dilemma for corporations. How can brand owners enforce a consistent standard across disparate quality systems in an efficient, timely manner? E2open's Collaborative Manufacturing intelligent application suite provides full visibility into and control for all production, including existing plants, newly acquired factories and outsourced manufacturing.

Experience at Scale

E2open has more than a decade of experience enabling seamless quality processes across internal and outsourced production for Global 2000 companies. This includes integration with siloed manufacturing execution and quality systems, timely collection and normalization of data, and the creation of product genealogies to know the ingredients or components used in every product and exactly what happened at each stage of production and distribution.

Get Ahead of Issues and Make the Best Decisions

Complete visibility and control result in higher production conformance and a distinct speed advantage when dealing with variances. Streamlined quality processes facilitate regulatory compliance and adherence to yield specifications maximizes profitability. Identifying defects or non-conformances earlier in the production cycle allows lots to be quarantined with minimal waste, and commonality analysis promptly reveals other batches that need scrutiny. If required, efficient recall processes quickly manage returns from the field to limit legal liability and revenue loss.

Applications

Manufacturing Visibility

Gain deep visibility into contracted production processes or distributed internal manufacturing to manage process yields, quality conformance and regulatory compliance.

Contract Compliance

Eliminate the labor-intensive reconciliation of utilized services and associated invoices. Multiply efficiencies with accurate and timely payments.

Manufacturing Instructions

Streamline the exchange and archiving of manufacturing recipes and quality notes across multiple parties. Gain unparalleled speed for product ramp-ups and issue resolution.

Manufacturing Quality & Traceability

Trace the origin of any ingredient, product, lot or batch—along with manufacturing steps and distribution conditions—to evaluate quality issues and manage recalls.

“ One of the key benefits to E2open Collaborative Manufacturing was inventory lot visibility. In the past, we were using spreadsheets to share information between us and our contract manufacturers. E2open enables us to have the right visibility and information, which leads to actionable decisions with quicker action. ”

Director of Operations

Global Network Equipment Manufacturer

About E2open

At E2open, we're creating a more connected, intelligent supply chain. One that starts with the ability to sense and respond to real-time demand and supply constraints. One that brings together data from customers, channels, suppliers, contract manufacturers and partners. One that enables companies to use data in real time, with cognitive artificial intelligence and machine learning to drive smarter decisions. One that delivers all this complex information through a single pane of glass that provides a clear view across the supply and demand ecosystem. E2open is changing everything. Demand. Supply. Delivered.
