

E2OPEN®

E2open Transportation Management

Simple, Easy and Cost-Efficient Logistics

Shipping accounts for roughly 15% of product costs, making transportation management technology that automates and optimizes logistics activities critical to the bottom line. **E2open's Transportation Management application** is a rapidly-deployed, easy-to-use transportation management system (TMS) that enables shippers to optimize carrier selection across all transportation modes, simplify booking and tendering and streamline payments.

Transporting goods and merchandise requires a careful strategy to coordinate with all logistics ecosystem partners. A TMS is essential to easily search logistics rates and schedules, book capacity, track goods in-transit and ensure carriers are paid on time. However, most TMS implementations are cumbersome, lengthy and expensive.

One of E2open's Transportation and Logistics intelligent applications, E2open Transportation Management provides everything required on a single platform. Companies can quickly plug into E2open's network of carriers and logistics service providers to get started without a lengthy, costly implementation. Shippers can easily plan and execute bookings with all transport carrier types, reducing time, cost and potential errors. In-transit visibility tools that comply with industry standards for track-and-trace provide real-time milestone updates. Once shipments are received, automated payment functionality ensures that carriers and logistics providers are quickly paid.

KEY FEATURES

-  Consolidated pricing, booking and tendering with carriers across all lanes, modes and classes
-  Real-time activity social stream for collaboration among shippers, carriers and third-party logistics (3PL) providers
-  Quick connection to logistics providers through E2open's global carrier network
-  Automatic matching and reconciliation of carrier invoices
-  Global in-transit visibility across all modes
-  Reporting and dashboards with customized KPIs and actionable statistics
-  Highly intuitive user interface shrinks start-up time with "near-zero" training

KEY BENEFITS

-  Saves time by consolidating all bookings on one platform
-  Reduces freight costs by 5%-10% through automated load consolidation, mode selection and carrier optimization
-  Automates 80% of manual processes such as spreadsheets, emails and phone calls
-  Accelerates implementation time, increases user adoption rate and improves total cost of ownership
-  Reduces billing errors by connecting the original booking order with the invoice

TMS Made Easy®

E2open Transportation Management is a rapidly deployed, one-stop TMS for companies of any size to manage simple domestic logistics operations. Once in place, other functionality in E2open's Transportation and Logistics suite can be introduced to enable even more complete transportation management activities with the capability to scale to complex international shipments.

Optimized Shipment Cost and Speed

Shippers can evaluate various freight options for international and domestic shipments to select the lowest price and best schedule. Side-by-side comparisons help optimize speed and spend. Shippers can locate rates for lanes across numerous contracts and calculate a total cost based on the contract terms. Carrier and route selection can be automated with decision-making tools.

Multi-Mode Shipment Requests

The application supports multi-mode shipment booking and tendering with ocean, rail, truck and parcel carriers on a single platform. With direct connections to major carriers, the booking or tendering request process is seamless and eliminates manual transactions, emails or phone calls. The system transmits shipment instructions or other related regulatory data and returns carrier responses in the same platform.

Audit and Payment

Before authorizing and processing carrier payments, shippers can ensure that every line on the bill is accurate. Invoices are automatically compared against contract rates, eliminating manual and error prone reconciliation. The system flags any discrepancy for review and automatically approves correct invoices for payment.

Connection to Domestic and International Providers

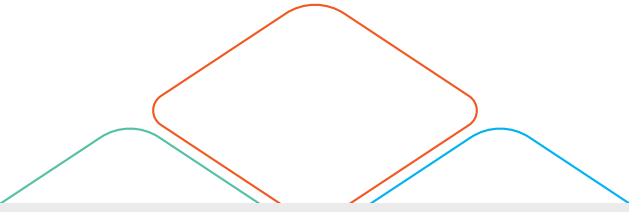

E2open's applications are powered by the world's largest business network, with a comprehensive logistics community of 6,000 rail and truck carriers, 800 ocean and 200 air freight carriers, 16,000 freight forwarders and many of the most-notable logistics service providers. More than 45 million container orders are initiated annually on the E2open platform, representing over one-quarter of global ocean trade.

Full Tracking and Visibility

E2open's Logistics Activity Stream eliminates the emails, phone calls and texts about in-transit shipment status. This real-time social communication tool pushes alerts and exceptions to designated team members, providing updates on their shipments. With integration to E2open's Global Logistics Visibility application, companies gain the multi-mode visibility required to see unexpected events, understand their impact and take action to resolve them, orchestrating activities across all partners in the demand, supply and logistics ecosystems.

End-to-End Supply Chain Management Platform

Once an organization implements any E2open platform application, it is easy to add more capabilities in the future for better visibility, coordination and control over the end-to-end supply chain. The E2open platform creates a digital representation of the internal — and optionally external — network, connect internal enterprise resource planning (ERP) and financial systems using SAP® and Oracle® certified adapters for timely data feeds, and normalizes and cleanses the data to make it decision-grade. Using machine learning-enabled algorithms and supply chain management applications, the platform processes the data and provides bi-directional, closed-loop communications back to ERP systems for execution. This facilitates the evolution of supply chain processes towards true convergence of end-to-end planning and execution.

Global shipping is complex and costly, but technology can help companies stay ahead. Rapid deployment and the most user-friendly TMS streamlines logistics, making it simple, easy and cost-efficient.
